

Business Brief

Target niche, pricing, go-to-market, the agent opportunity, and month-by-month revenue projections

Prepared June 2026 · Confidential working document

1. Executive summary

PromptGenius AI is a ready-to-launch platform that generates expert, structured AI prompts for any industry and lets creators package and sell them as products. The underlying market — AI writing and assistant software — is large (roughly US \$1.8–2.3B in 2025) and growing 22–24% per year. The opportunity is real but the category is crowded and commoditizing, so success depends less on the technology (already built) and more on a sharp niche, a strong free-to-paid funnel, and a feature set competitors don't offer.

Verdict

A worthy business as a focused, bootstrapped niche SaaS or creator marketplace — realistically reaching roughly \$10k–\$20k MRR within 12 months of disciplined marketing, with meaningful upside from an agent and marketplace layer. Not a venture-scale 'next Jasper' bet, but a credible profitable product.

2. The unmet market need

Existing tools each leave a clear gap. Jasper is powerful but expensive and enterprise-oriented; HIX and AIPRM offer generic, one-size-fits-all prompts with weak monetization; PromptBase is a marketplace but does not generate prompts or hold any brand context. No single product combines affordable, vertical-specific prompt generation with built-in monetization on both web and mobile.

The white space PromptGenius can own

- Vertical depth — prompts that already speak one industry's language and frameworks, not generic templates.
- Creator monetization built in — generate, bundle, price, and sell prompts (and later, agents) in one place.
- On-brand output for small businesses — persistent brand voice at an SMB price, a feature only enterprise tools offer today.
- Native mobile — competitors are browser-only; a mobile app is a genuine differentiator.

3. Recommended target niche

Do not launch as 'prompts for everyone' — that loses to free ChatGPT. Win a specific audience first, then expand. The strongest beachhead candidates share three traits: they publish content constantly, they pay for tools, and they congregate in reachable online communities.

Primary recommendation: e-commerce sellers & DTC marketers (Shopify / Etsy / Amazon)

They produce endless product descriptions, ads, and emails; they already buy apps; and they gather in dense, marketable communities. Prompts map directly to revenue for them, which makes paying easy to justify.

Strong secondary niches

- Real estate agents — listings, outreach, social posts; high willingness to pay for lead generation.

- Marketing freelancers & small agencies — daily content across many clients; value bundles and brand kits.
- Coaches, course creators & solopreneurs — content engines who happily buy 'done-for-you' systems.

4. Gaps PromptGenius closes

Competitor	Their limitation	PromptGenius edge
Jasper	\$49+/mo, enterprise-heavy, no resale model, slowing growth	Affordable, SMB/creator-first, sell-your-own-prompts marketplace
HIX / AIPRM	Generic prompts, low paid conversion, no vertical depth, browser-only	Industry frameworks, structured 6-part output, native mobile app
PromptBase	Marketplace only — no generation, no brand context	Generate + bundle + sell + brand voice in one product

5. Pricing strategy

A freemium ladder: a genuinely useful free tier as the lead magnet, an affordable Pro plan for daily users, and an Enterprise/agent plan for teams and power-sellers. Annual billing is discounted to lift commitment and cash flow.

Tier	Price	Best for	Key unlocks
Starter	Free	First-time users, lead capture	5 generations/mo, simple prompts, save & favorite
Professional	\$29/mo (\$23 annual)	Daily creators & freelancers	Advanced prompts, frameworks, brand kit, bundle generator
Enterprise	\$199/mo (\$149 annual)	Teams, agencies, power-sellers	Workflows + agents, unlimited use, API, team seats

Conversion levers

- Upgrade triggers fired at the moment of intent (hitting a quota or a locked feature).
- Annual discount (20–25%) and occasional launch/scarcity pricing on bundles.
- Usage-metered agent runs as a high-margin add-on (credits) on top of subscriptions.

6. How agents fit your product (the Jasper-agent opportunity)

Jasper's newest value is 'agents' — autonomous AI workers that complete a whole job (research, optimization, personalization, translation) rather than returning a single piece of text. PromptGenius is well-positioned to offer the same, because it already generates multi-step workflows. An agent is simply a workflow that runs itself: it executes each step, can use tools (web search, your data), and delivers a finished result.

Your agent offering, in three layers

Layer	What the customer gets	Example (e-commerce niche)
-------	------------------------	----------------------------

Pro: workflow templates	Guided multi-step prompt chains you copy-paste between steps (already built)	'New product launch' 5-step content chain
Enterprise: runnable agents	Agents that execute end-to-end and return finished assets autonomously	Listing Agent: turns a photo + specs into title, description, tags & ad
Marketplace: sell agents	Creators publish their own agents; you take a revenue share	A top seller's 'SEO Brief Agent' rented monthly

Why this matters commercially

Agents move you from one-off sales to recurring, usage-based revenue and justify the Enterprise price. They are built on the same Claude engine you already use (Anthropic's tool-use / managed agents), so it is an extension of the current product, not a rebuild.

7. Go-to-market plan

Phase / channel	Tactic	Goal
Pre-launch	Niche landing page + free tool + waitlist; build in public	Collect emails, validate demand
Launch	Product Hunt; niche Reddit/Facebook/Discord/LinkedIn groups	First users & feedback
SEO content	'Best prompts for [niche]' guides, free prompt packs	Compounding organic traffic
Free-tool funnel	No-signup 'improve my prompt' tool -> email -> nurture -> paid	Convert traffic to subscribers
Flywheel	Creator marketplace + affiliates + partnerships; paid ads on proven funnel	Scale revenue & supply

8. First features to build (to maximize conversion)

Three focused additions deliver the most conversion lift for the least build. Each is verifiable in the existing mock mode before any paid keys are added.

1. Free, no-signup 'Generate / Improve a prompt' tool

The single biggest top-of-funnel lever (this is HIX's hero feature). Paste a rough prompt or describe a goal, get an optimized result instantly; capture an email to save it. Drives traffic and signups.

2. Vertical prompt packs + template gallery for the chosen niche

Curated, shareable starting points that rank in search and give instant value — far better cold-start than always generating from scratch.

3. Brand Kit (persistent brand voice, audience & product context)

Inject the user's brand into every generation. This is the stickiness lever — it raises output quality, lowers churn, and increases lifetime value. (Marketplace and runnable agents are the phase-2 bets.)

9. Revenue projections

The model below is a transparent funnel calculation grounded in industry benchmarks (freemium SaaS visitor-to-signup of 3–5%, free-to-paid of 3–5%, monthly churn of 5–7%, and a blended revenue-per-paying-user of about \$38–\$42, reflecting mostly \$29 Pro plans with some Enterprise and annual plans). 'Steady-state MRR' is the recurring monthly revenue once the subscriber base matures (typically 12–18 months); 'Yr-1 MRR' is the more realistic month-12 figure while the base is still building.

Scenario	Visitors /mo	Paying subs	ARPU	Steady MRR	Yr-1 MRR
Conservative	8,000	~100	\$38	~\$3,900	~\$2,000
Base	20,000	~530	\$40	~\$21,000	~\$10,000
Optimistic	30,000	~1,500	\$40	~\$60,000	~\$30,000

What a realistic first year looks like

- Months 1–3: small traffic, mostly free users; revenue often under \$1k/mo while you find the funnel.
- Months 4–8: SEO + community traction compounds; base case reaches roughly \$4k–\$8k MRR.
- Months 9–12: with steady marketing, base case lands around \$10k–\$18k MRR (~\$120k–\$215k ARR run-rate).
- Add-on upside: a marketplace take (~20% of creator sales) and metered agent runs are additive on top of subscription MRR.

How to read these numbers

These are illustrative projections, not guarantees. The dominant variable is traffic — reaching the visitor counts above through marketing is the real work. For comparison, AIPRM earns an estimated \$12k–\$120k/mo from ~1.2M monthly visits; PromptGenius assumes far less traffic but higher revenue per visit via subscriptions and vertical focus. Tighten the niche and the conversion rates rise; stay generic and they fall toward the conservative case.

10. Risks & mitigations

- Commoditization — foundation models keep improving and add built-in prompt help. Mitigate with vertical depth, brand memory, and agents that do real work.
- Weak conversion — lots of free users, few payers (AIPRM's pattern). Mitigate with a tight niche, clear upgrade triggers, and the brand-kit stickiness lever.
- Crowded market — many similar tools. Mitigate by owning one audience and the resale/marketplace angle competitors lack.
- Marketing dependency — the product is built; growth is now a distribution problem. Mitigate with a repeatable free-tool -> email -> paid funnel before scaling spend.
